

✔ ZawajAfrica – Full Stack website development

Hello Iftikar

Below is the full breakdown of deliverables and integrations for the ZawajAfrica web app. This version focuses on core features only – no GPT/advanced AI for now. Please go through the checklist, and let me know if any assistance is needed during the process.

◆ 1. Hosting & Domain Setup

The domain is registered with QServers.ng.

You'll deploy the completed app to DigitalOcean.

DNS will remain on QServers, but email will be handled via Zoho Mail (paid plan).

I can provide access or assist with QServers DNS or Zoho MX record setup if needed.

◆ 2. Zoho Integrations (Paid Plan)

Zoho Mail will be used for all platform emails (e.g., registration, therapist booking confirmations).

Zoho Calendar/Bookings should be used for scheduling therapy sessions.

Users choose date/time → email notification sent to therapist/admin.

Zoho Chat (SalesIQ or Zoho Cliq) may be added for live support/chat features within the app.

If needed, Zoho CRM can be integrated later to manage user or therapist info.

◆ 3. Chatbot Integration

A pre-built chatbot is ready. I will provide:

The script/platform or embed code

Chatbot will answer basic questions and guide new users.

Place it prominently in the Help/Support area and optionally on the homepage.

◆ 4. Book a Therapist (Figma Ready)

UI already designed in Figma.

Feature includes:

User fills form (name, topic, platform preference, date/time).

Platform options: Zoom, WhatsApp, Telegram, Google Meet.

Booking triggers confirmation (Zoho calendar or email notification).

Optionally, integrate with Zoho Bookings to automate appointment handling.

◆ 5. Translation Feature

Integrate Azure Translator API (Microsoft) to enable:

Translation of key sections (profile, chats, messages).

I will provide the Azure API key.

◆ 6. Payment Integration

Use Paystack for:

VIP subscription

Therapist bookings (if payment is required)

Integration must be secure and mobile-friendly.

I will provide the Paystack API keys and documentation.

◆ 7. General Development Notes

Follow the final Figma design exactly for frontend layout and flow.

Ensure the app is:

Fully responsive (mobile/tablet/desktop)

SEO-friendly and fast-loading

Integrated with all APIs smoothly (Zoho, Azure, Paystack)

Avoid using third-party platforms (like WordPress or Wix) — use Laravel

 Let me know if:

You need assistance accessing Zoho admin.

You prefer a short summary version for your reference.

You need sandbox/test keys for any integrations.
